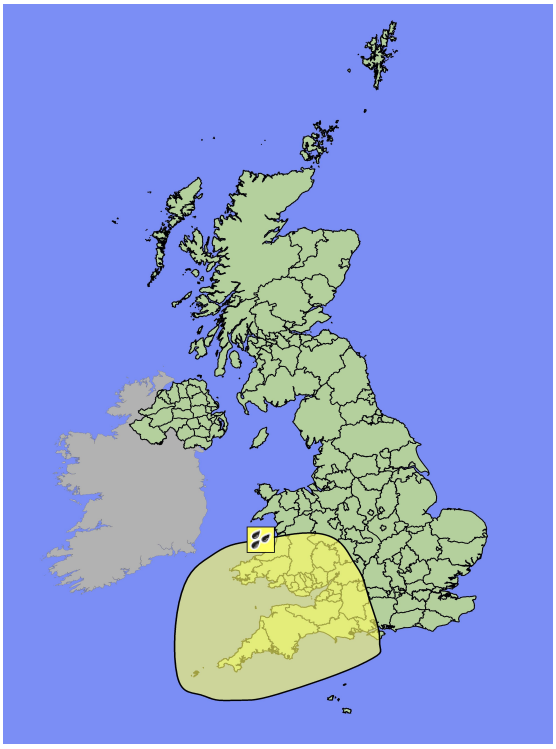
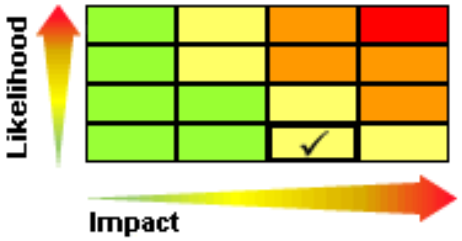
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep depression in the west Atlantic is expected to move erratically towards the UK, pulling up warm, moisture laden air as it does so. This may well cause a new, potentially intense, depression to form to the southwest of England and run northeastwards into the country later on Wednesday or during Thursday. There is still a good deal of uncertainty about amounts of rain and locations affected, and this warning may well be revised over the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:00 on Thu, 18th Oct 2012** until **23:59 on Thu, 18th Oct 2012**

The ground remains saturated, and with the threat of further heavy rain, the public are advised to be aware that localised flooding remains a risk on Thursday.
